website for the OpenGL Programming Guide (the "Red Book"). The latest release – the ninth edition – brings the most comprehensive discussion of the OpenGL API completely up to date. This edition thoroughly discusses the features of OpenGL version 4.5, OpenGL's latest version, including: Direct State Access (DSA) which modifies the way that OpenGL objects (e.g., textures, FBOs, etc.) modify their attributes.

The OpenCL programming model consists of producing complicated task graphs from data-parallel execution nodes. In a given data-parallel execution, commonly known as a kernel launch, a computation is defined in terms of a sequence of instructions that executes at each point in an N-dimensional index space.
