Oracle Database 11g Real Application Clusters Handbook 2nd ...

Oracle Real Application Clusters (RAC) allow customers to run a single Oracle Database across multiple servers in order to maximize availability and enable horizontal scalability, while accessing shared storage. User sessions connecting to Oracle RAC instances can failover and safely replay changes during outages, without any changes to end user applications, hiding the impact of the outages from end users.

Real Applications Clusters | Oracle

Overview of Oracle Real Application Clusters. A cluster comprises multiple interconnected computers or servers that appear as if they are one server to end users and applications. Oracle RAC enables you to cluster Oracle databases. Oracle RAC uses Oracle Clusterware for the infrastructure to bind multiple servers so they operate as a single system.

Introduction to Oracle Real Application Clusters

Oracle Application Express (abbreviated APEX, previously named Oracle HTML DB) is a web-based software development environment that runs on an Oracle database. It is fully supported and comes standard (at no additional cost) with all Oracle Database editions and, starting with Oracle 11g, is installed by default as part of the core database install.

Oracle Application Express - Wikipedia

Real Application Testing. Oracle Real Application Testing database option includes two solutions to test the effect of system changes on real-world applications, Database Replay and SQL Performance Analyzer (SPA). Database Replay enables you to effectively test system changes in test environments by replaying a full production workload on the test system to help determine the overall impact of the change.
