## Paper Tentang Wireless Sensor Network

A wireless sensor network is an ad hoc network with a large number of nodes, which are micro-sensors capable to collect and transmit environmental data autonomously. The position of these nodes need not be predetermined.

## Phd Research Proposal In Wireless Sensor Networks Paper

Localization of sensor nodes and efficient data gathering over a wireless sensor network (WSN) is vital in applications like cyber-physical systems, Internet of things and context-aware pervasive systems. In WSNs, sensor nodes transfer the data cooperatively using multiple hops over a network.

## Wireless Sensor Network Projects for Final Year Students

Wireless Sensor Networks (WSNs) can be defined as a self-configured and infrastructure-less wireless networks to monitor physical or environmental conditions, such as temperature, sound, vibration, pressure, motion or pollutants and to cooperatively pass their data through the network to a main location or sink where the data can be observed and analysed.
