The only simulation of its kind on the market, Virtual ChemLab for General Chemistry provides a 3D environment on the computer where students feel as though they are in the experiment. The simulations are designed to teach the cognitive processes behind introductory level laboratories with a focus on the decisions a student should make, not how a student should perform an experiment.

A good non-traditional lab tool can increase test scores, improve students' attitudes and preparedness for the hands-on lab, and strengthen conceptual knowledge. In one particular study, the students said the online laboratory experience was the same as or better than their prior experiences in the traditional setting.
