A foundational study of waves and vibrations will prepare learners for advanced courses in physics and related fields of engineering. The skills utilized in analyzing these phenomena are applicable to many different systems because vibrations and waves are so ubiquitous. For instance, learners

will understand how the “resonant” modes of a tall building are analogous to simple systems of coupled oscillators.

Caused by an object vibrating, transfers energy (not the medium)

Wave speed. Speed of a wave (m/s), changed by density of a substance, temp, etc., travels faster through solid than a gas.

Superposition. When

two or more waves travel through the same medium, simultaneously, the resultant displacement at any given point is the vector sum of the displacement due to the individual waves.

Mechanical Wave A

mechanical wave is a travelling disturbance that transports energy through a medium

Created when a disturbance (vibration) causes vibrations in its vicinity The particles in the medium are excited by vibrations in neighbouring particles
