Auxin controls almost every aspect of plant growth and development, mainly by regulating gene expression at the transcriptional level (Salehin et al., 2015). Auxin is perceived by its receptor TRANSPORT INHIBITOR RESPONSE 1/AUXIN SIGNALING F-BOX (TIR1/AFB) and coreceptor AUXIN RESISTANT/INDOLE-3-ACETIC ACID (AUX/IAA).

The small size of typical plant cells (20 to 100 μm) has been a serious impediment to the study of cell wall mechanical properties. To measure the extensibility of isolated cell walls from higher plants, researchers must place entire frozen and thawed organs or tissues in an extensometer , as illustrated in textbook Figures 14.18 and 14.19.
