Concerning the Spiritual in

Art, Kandinsky digs deeper

in the research of

interaction of nature, arts,

and human, though from a

concrete position already.

Starting from the

centerpiece, i.e. a point,

he studies its basic

properties and capabilities:

at first academically, then

in fine art and other arts,

Wassily Kandinsky – Point and Line to Plane, 1926

In *Point and Line to Plane*, one of the most influential books in 20th-century art, Kandinsky presents a detailed exposition of the inner dynamics of non-objective painting. Relying on his own unique terminology, he develops the idea of point as the proto-element of painting, the role of point in nature, music, and other art, and the combination of point and line that results in a unique visual language.

Point and Line to Plane is primarily a priori and Abstraction in Art and Nature a posteriori. They benefit from being read together. Unlike Abstraction in Art and Nature , this derives formal relationship through a quasi-axiomatic method, using the most elementary visual primitives. Kandinsky attempts to derive and relate intuitive and emotional responses to these forms.

The point is the most concise form but, according to its placement on the basic plane, it will take a different tonality. It can be isolated or resonate with other points or lines. A line is the product of a force which has been applied in a given direction: the force exerted on the pencil or paintbrush by the artist.

The sterile, corkscrew expanse of the Guggenheim is a concrete geometric presence in *Point and Line to Plane*, which takes its title from a 1947 book of art theory by Wassily Kandinsky and is punctuated by images of his abstract canvases, as well as those of his lesser-known predecessor Hilma af Klint. POINT AND LINE TO PLANE BY WASSILY KANDINSKY

A form which, when on the otherwise empty basic plane, may still be considered to be a point, must be termed a plane when, for example, a very thin line appears with it upon the basic plane (Fig. 2)..

Point And Line To Plane

Since we found a single value of t from this process, we know that the line should intersect the plane in a single point, here where $t = -3$. So the point of intersection can be

determined by plugging this value in for t in the parametric equations of the line. Here: $x = 2 - (-3) = 5$, $y = 1 + (-3) = -2$, and $z = 3(-3) = -9$.
