Probiotics can be utilized to prevent cancer in the early stage as well as to avoid side effects associated with later stage cancer. The potential role of probiotics as antimetastatic components with other substances such as vitamins, minerals, antioxidants, polysaccharides, and alkaloids is under investigation.

Probiotics and Cancer | SpringerLink

Probiotics are widely used microorganisms which exert health benefits after ingestion in sufficient amount. Their role in the management of gastrointestinal health is already proven. These organisms can also contribute to the management of several diseases including cancer.

Probiotics and Cancer | SpringerLink

A number of experiments investigating application of genetically engineered probiotics expressing human papillomavirus E7 oncoprotein or the treatment of cervical cancer have shown that in contrast to the traditional polyvalent vaccines, which have preventive properties only on the development of the disease, "probiotic vaccination" has been demonstrated to have both protective (stimulating immunological response) and therapeutic effects (tumor regression) [100,101,102,103].

Abstract. Colorectal cancer (CRC) is the fourth most frequent cause of cancer related mortality in the world. Approximately 944,000 new cases were diagnosed globally in 2000 and this accounts for 9.2% of all new cancer cases (IARC, 2000). In Western societies namely Europe, North America and Australasia, it is the second most prevalent cancer after lung/breast (Boyle and Langman, 2000).

Potential Protective Effects of Probiotics and ... Springer

Probiotics, prebiotics and synbiotics that are found in functional foods, health supplements and nutraceuticals and short chain fatty acids that are formed in the colon as a result of microbial fermentation of undigested bioactive carbohydrates by Bifidobacterium and Lactobacillus inhibit colonic epithelial cells and minimize inflammation, thereby exhibiting immunomodulatory effects. This book tries to address the novel unexplored benefits and mechanism of action of these functional foods.

Probiotics and Bioactive Carbohydrates in Colon Cancer ...

Abstract A number of investigations, mainly using in vitro and animal models, have demonstrated a wide range of possible mechanisms, by which probiotics may play a role in colorectal cancer (CRC)

prevention. In this context, the most well studied probiotics are certain strains from the genera of lactobacilli and bifidobacteria.
