Questions and Answers-
Relational Algebra

Access Free Relational

Algebra.

Relational algebra is a procedural query language. It gives a step by step process to obtain the result of the query. It uses operators to perform queries. Types of Relational operation

1. Select Operation: The select operation selects tuples that satisfy a given predicate. It is denoted by sigma (?).

Relational Algebra.

Relational algebra is a
procedural query
language, which takes
instances of relations as
input and yields
instances of relations as

Access Free Relational

output. It uses operators to perform queries. An operator can be either unary or binary. They accept relations as their input and yield relations as their output.

Relational algebra is performed recursively on a relation and intermediate results are also considered relations.
