the free water level is defined by zero capillary pressure. Obviously, if the largest pore is so large that there is no capillary rise in this size pore, then the free water level and 100 water saturation level, i.e., WOC, will be the same. 43 Wettability and Distribution of Reservoir Fluids .

The approach is entirely general in recognising that the superposition of dimensionless pressure, or pseudo pressure functions, permits the analysis of any rate-pressure-time record retrieved from a well test, for any type of reservoir fluid. To appreciate this generality, the reader is advised
