the animal itself may become a source of food or other products at the end of its useful life.

## *Draft animal | Britannica*

Draught animal power can be even more economic when one bullock is used instead of a pair or when a (cross-bred) cow is used instead of a male, since it reduces the cost of maintaining the larger herd necessary to satisfy both replacement and milk production requirements. It is expected that draught animal power will decline slightly by the year 2000 (FAO, 1987) as will dependency on human power (Figure 3), but the contribution of draught animals will remain much more important than that of ...
