Roots Stems And Leaves Test Answers

Stems bear flower, leaves and buds, but roots do not. Stems do not have any shoot tip, rather the stems possess in a terminal bud, while Roots have root cap at the root tip. Stem hairs can be unicellular or multicellular, and are present all through the stems, though in roots, unicellular root hairs are present in the cluster, behind the root cap.

Difference Between Stems and Roots (with Comparison Chart ...

Roots absorb water and nutrients from soil. Figure 2: Root vegetables such as carrots have edible taproots. Stems. Stems produce leaves, branches, and flowers. They hold the leaves up to the sunlight so they can carry out photosynthesis. They transport water and nutrients between the roots to the leaves, and they also give structure to the plant.
