Scientific ethics calls for honesty and integrity in all stages of scientific practice, from reporting results regardless to properly attributing collaborators. This system of ethics guides the practice of science, from data collection to publication and beyond. As in other professions, the scientific ethic is deeply integrated into the way scientists work, and they are aware that the reliability of their work and scientific knowledge in general depends upon adhering to that ethic.

Scientific ethics in this sense is often argued to be an oxymoronic term. Science deals in empirical facts, discovering what is the case, while ethics deals in normative matters, uncovering what ought to be the case. A scientific ethics would thus commit the naturalistic fallacy of confusing what is with what ought to be.
