Section 3.1 Review - The Cartesian Coordinate System. The Cartesian Coordinate System was established by 18th century French mathematician Rene Descartes. It gives us a method of creating a graph or picture of our ordered pairs. Once established, we can use a graph to analyze our ordered pairs. The Cartesian Coordinate System looks like a piece of graph paper.

The Cartesian Coordinate System. Chapter 3, Section 1. Cartesian Coordinates--Overview. Locate points in 2-D by specifying where the point is relative to the Origin. Any point may be specified by an ordered pair (described below). The horizontal line labeled "x" is the x-axis. The vertical line labeled "y" is the y-axis.

A Cartesian coordinate system (UK: / k ɑr t i ɪ z j ɪ n /, US: / k ɑr t i ɪ n /) is a coordinate system that specifies each point uniquely in a plane by a set of numerical coordinates, which are the signed distances to the point from two fixed perpendicular oriented lines, measured in the same unit of length.Each reference line is called a coordinate axis or just axis (plural ...

Spherical coordinates (r, θ, φ) as commonly used in physics (ISO 80000-2:2019 convention): radial distance r (distance to origin), polar angle θ (angle with respect to polar axis), and azimuthal angle φ (angle of rotation from the initial meridian plane).The symbol φ is often used instead of r.

Carl uses two numbers to locate the restaurant. In the Cartesian coordinate system, these numbers are called coordinates and they are written as the ordered pair ((2,3)\text{(.)}) The first coordinate, (2)\text{(.)} represents distance traveled from Carl's house to the east (or to the right horizontally on the graph). The second coordinate, (3)\text{(.)} represents distance to the north (up vertically on the graph).

3.1 Graphing Ordered Pairs Algorithm To graph the ordered pair (a,b)on the rectangular coordinate system, we: 1 begin at the origin and move along the x-axisaunits right or a units left (right if ais positive and left if ais negative). 2 From that point we move bunits up or down (up if bis positive and down if bis negative).
