Pathways Of Tissue Factor

The expression of surface tissue factor by cells of the monocyte/macrophage lineage is a major contributor to the development and progression of local and systemic inflammatory reactions. A wide variety of extracellular stimuli act to upregulate tissue factor (TF), the principal inducer of the coagulation cascade in vivo. Since both the coagulation cascade and TF have multiple roles, the ...

Tissue Factor Pathways linking obesity and inflammation

Tissue factor, also called platelet tissue factor, factor III, or CD142, is a protein encoded by the F3 gene, present in subendothelial tissue and leukocytes. Its role in the clotting process is the initiation of thrombin formation from the zymogen prothrombin. Thromboplastin defines the cascade that leads to the activation of factor X—the tissue factor pathway. In doing so, it has replaced the previously named extrinsic pathway in

Expressed In **incompletely understood.**

Inhibition of tissue factor signaling suppresses tumor growth

Three Wnt signaling pathways have been characterized: the canonical Wnt pathway, the noncanonical planar cell polarity pathway, and the noncanonical Wnt/calcium pathway. All three pathways are activated by the binding of a Wnt-protein ligand to a Frizzled family receptor , which passes the biological signal to the Dishevelled protein inside the cell.

inhibitor (TFPI), which is produced predominantly in endothelial cells and platelets, inhibits the initiating phase of clot formation. We investigated the effect of fluvastatin on TFPI expression in cultured endothelial cells. Methods: Human umbilical vein endothelial cells (HUVECs) were treated with fluvastatin (0-10^μM). The expression of TFPI mRNA and antigen were detected by RT-PCR and western blotting, respectively.

Fluvastatin Upregulates the Expression of Tissue Factor

•••

Tissue factor (TF) is a cell-
