a. What is the equivalent resistance of the parallel combination? b. What is the current through each resistor? 23. Resistors R1, R2, and R3 have resistances of 15.0 Ω , 9.0 Ω , and 8.0 Ω respectively. R1 and R2 are connected in series, and their combination is in parallel with R3 to form a load across a 6.0-V battery. a.

However, the skills evaluation sheets must be distributed at least one week before the practical exam. The EMT\CFR student manual will have "lab skills" practice sheets intended to focus teaching and practice on the critical skill performances. These sheets tend to encourage more than the absolute "minimum required" to pass.

p.d. in parallel circuit: The potential difference in the circuit across each resistor is the same. Current in parallel circuit: The current flowing through each resistor is not the same. It splits as it travels from the circuit. Total current in parallel circuit: The total current flowing through the circuit can be calculated by adding the values of current flowing through each resistor.
