The Database Manager is used to add additional servers to your Orion configuration, perform queries, view database and table details, export data, and edit database values. For more advanced database maintenance, SolarWinds recommends that you use the Server Management Studio provided with Microsoft SQL Server to back up, clear historical maintenance records, and perform other maintenance.

The SolarWinds Academy offers education resources to learn more about your product. The curriculum provides a comprehensive understanding of our portfolio of products through virtual classrooms, eLearning videos, and professional certification.

Documentation for NPM - SolarWinds

In the user mapping section the user will be mapped to all 3 databases with a default schema of dbo and each database will have db_owner selected as the role for membership. For my read-only account which will access two databases, I'm planning to map that user to the following server Role: public.

Database Permission Help - THWACK - SolarWinds

Device schema in SQL database Hi, we are trying to collect device info (IP, MAC, HOSTNAME) from Solarwinds, with DB Connect add-on for Splunk. I managed to connect to the database and looking at the schemas/tables, I am unable to find anything that related to devices reporting to Solarwinds.

SolarWinds Information Service v3.0 Schema Documentation

SolarWinds recommends the following settings to optimize reporting capabilities for a MySQL database instance. MySQL Performance Schema. The Performance Schema monitors server events and collects performance data. If the Performance Schema is not enabled, DPA provides limited data. Monitoring with the Performance Schema disabled excludes the following data: All instrumented wait events; All wait operations; All file wait time, broken out by file
