sufficient information to enable the assembly of a component. •

Assembly Drawings must have a number of views to show how parts fit together. • Section views to show how parts fit and to eliminate hidden detail. •

Dimensions to indicate range of motion or overall size of assembly for reference purposes.

Forward osmosis is an osmotic process that, like reverse osmosis, uses a semi-permeable membrane to effect separation of water from dissolved solutes. The driving force for this separation is an osmotic pressure gradient, such that a "draw" solution of high concentration, is used to induce a net flow of water through the membrane into the draw solution, thus effectively separating the
