There are approximately three hundred exercises for solution in the text.

These exercises emphasize principles of discrete-event simulation and provide practice in utilizing concepts found in the text. Answers provided here are selective, in that not every problem

simulation models the operation of a system as a sequence of events in time. Each event occurs at a particular instant in time and marks a change of state in the system. Between consecutive events, no change in the system is assumed to occur; thus the simulation time can directly jump to the occurrence time of the
