solution manual of the 110
questions that were presented in
the eight chapters throughout the
author's previous book, Optimal
Control Engineering with MATLAB.
The manual is prepared as an
independent book since it
includes the problems' questions,
figures, and all necessary
equations and formulas in a
summarizing fashion and within
the given solution frameworks.

Optimal control theory is a branch of mathematical optimization that deals with finding a control for a dynamical system over a period of time such that an objective function is optimized. It has numerous applications in both science and engineering. For example, the dynamical system might be a spacecraft with controls corresponding to rocket thrusters, and the objective might be to reach the moon with minimum fuel expenditure. Or the dynamical system could be a nation's economy, with the object
