A spring tide is a common historical term that has nothing to do with the season of spring. Rather, the term is derived from the concept of the tide "springing forth." Spring tides occur twice each lunar month all year long without regard to the season.

What are spring and neap tides? - National Ocean Service

Spring tide, tide of maximal range, near the time of new and full moon when the Sun and Moon are in syzygy— i.e., aligned with the Earth. Conjunction is the time during new moon when the Sun and Moon lie on the same side of the Earth.

Spring tide | physics | Britannica

Spring tides When there is a high tide, the Sun, Moon and Earth are in alignment and the gravitational force is strong. These tides are known as spring tides and occur twice a month. In this case...

Tides - Met Office

spring tide A tide in which the difference between high and low tide is the greatest. Spring tides occur when the moon is either new or full, and the sun, the moon, and the Earth are aligned. When this is the case, their collective gravitational pull on the Earth's water is strengthened.

Spring tide - definition of spring tide by The Free Dictionary

The spring tide is where the sun and the moon align to create the greatest gravitational pull on the sea. This is because both the sun and the moon have combined greater gravitational force which pulls the sea towards them.

Explained: What is a neap tide and what is a spring tide?

The tide's range is then at its maximum; this is called the spring tide. It is not named after the season, but, like that word, derives from the meaning "jump, burst forth, rise", as in a natural spring.
