execution (e.g. to dump the database contents to the attacker). SQL injection must exploit a security vulnerability in an application's software, for example, when user input is either incorrectly filtered for string literal escape ...

SQL injection - Wikipedia

Blind SQL Injection This type of injection attack does not show any error message, hence “blind” in its name. It is more difficult to exploit as it returns information when the application is given SQL payloads that return a true or false response from the server. By observing the response, an attacker can extract sensitive information.
