- Creating

Procedure Sql

Procedures

Triggers And

User

A trigger is a special kind of stored procedure-one that cannot be executed

Access Free Sql Procedures

explicitly, instead of attached to an event. Whenever the event takes place, the trigger fires and the trigger's code runs. The objective of this blog is to discuss stored procedures and

Access Free Sql Procedures

triggers in SQL
Server. Also, we
will discuss how
they are
different from
each other.

Access Free Sql Procedures

Triggers And User Defined Functions On Stored

Procedures can be defined as the set of SQL statements that are stored in the server. The users can refer from the stored procedure and does not have to

Access Free Sql Procedures

write individual
statements.

Stored

Procedures is a
tool that is
used to perform
any specific
operations like
Insert, Update
or Delete in our
database
recursively and
it can be used
to alter or

Access Free Sql Procedures

update any
records in
database.
