A statistical model is a mathematical model that embodies a set of statistical assumptions concerning the generation of sample data (and similar data from a larger population). A statistical model represents, often in considerably idealized form, the data-generating process. A statistical model is usually specified as a mathematical relationship between one or more random variables and other non-random variables. As such, a statistical model is "a formal representation of a theory" (Herman Adèr

Amazon.com: Stats: Data and Models (9780321692559): De ...

A standard statistical procedure involves the collection of data leading to test of the relationship between two statistical data sets, or a data set and synthetic data drawn from an idealized model. A hypothesis is proposed for the statistical relationship between the two data sets, and this is compared as an alternative to an idealized null hypothesis of no relationship between two data sets.

Statistics - Wikipedia

Estimate the model parameters. `from_formula` (formula, data[, subset, drop_cols]) Create a Model from a formula and dataframe. `hessian` (params) The Hessian matrix of the model. `information` (params) Fisher information matrix of model. `initialize` Initialize the model (no-op). `loglike` (params) Log-likelihood of model.
