Sugar in the Blood then is much more than a story of one family in one place; but also about exploitation throughout the empire. Exploitation of land and exploitation of people. That one family achieved a sort of harmony from the conflicts that resulted and eventually perhaps acknowledged a common humanity is testament to the resilience of all people.

Sugar in the Blood: A Family's Story of Slavery and Empire ...

Normal and diabetic blood sugar ranges . For the majority of healthy individuals, normal blood sugar levels are as follows: Between 4.0 to 5.4 mmol/L (72 to 99 mg/dL) when fasting ; Up to 7.8 mmol/L (140 mg/dL) 2 hours after eating ; For people with diabetes, blood sugar level targets are as follows:

Normal and Diabetic Blood Sugar Level Ranges - Blood Sugar ...

Hyperglycaemia (high blood sugar) Hyperglycaemia is the medical term for a high blood sugar (glucose) level. It's a common problem for people with diabetes. It can affect people with type 1 diabetes and type 2 diabetes, as well as pregnant women with gestational diabetes. It can occasionally affect people who do not have diabetes, but usually only people who are seriously ill, such as those who have recently had a stroke or heart attack, or have a severe infection.

Hyperglycaemia (high blood sugar) - NHS

Sugar in the Blood is a very well researched and engaging book that tells the story of the author's ancestors on Barbados, in the context of both British colonialism and the role of the sugar industry in the institutionalization of slavery in the Americas. In the process she also provides an excellent overview of the history of Barbados, which has been the most successful of Britain's former Caribbean colonies, post-independence.

Sugar in the Blood: A Family's Story of Slavery and Empire ...

The blood sugar level, blood sugar concentration, or blood glucose level is the concentration of glucose present in the blood of humans and other animals. Glucose is a simple sugar and approximately 4 grams of glucose are present in the blood of a 70-kilogram human at all times. The body tightly regulates blood glucose levels as a part of metabolic homeostasis. Glucose is stored in skeletal muscle and liver cells in the form of glycogen; in fasted individuals, blood glucose is maintained at a co

Blood sugar level - Wikipedia

Diabetes is a chronic condition characterized by high levels of sugar (glucose) in the blood. The two types of diabetes are referred to as type 1 (insulin dependent) and type 2 (non-insulin dependent). Symptoms of diabetes include increased urine output, thirst, hunger, and fatigue. Treatment of diabetes depends on the type.
