There is a huge application of surveying in civil engineering. There is no point in expecting the work of construction to be well managed and safe without surveying. The first step for civil engineers to do for any design and construction is surveying. The survey provides the whole background and clearance about how, when, and where constructional work to be done in a safe, efficient, and economical manner.

The basic principles of surveying have changed little over the ages, but the tools used by surveyors have evolved. Engineering, especially civil engineering, often needs surveyors. Surveyors help determine the placement of roads, railways, reservoirs, dams, pipelines, retaining walls, bridges, and buildings. They establish the boundaries of legal descriptions and political divisions.
