It is impossible to talk about System Safety without a discussion of Risk. Risk generally has two components: a probability of an event taking place, and the severity of the loss if the event does take place. The description of the event can be considered a third element.

**Risk - System Safety Engineering**

System Safety is the Systems Engineering (SE) application of engineering and management principles, criteria, and techniques to achieve acceptable risk within the constraints of operational effectiveness and suitability, schedule, and cost throughout the system's lifecycle. System safety covers the entire spectrum of environment, safety, and occupational health (ESOH) considerations.

**System Safety Engineering - AcqNotes**

Employ system safety thinking throughout the lifecycle of a system or service using a broad, systematic imaginative anticipation of safety risks, causes and consequences. Contribute to the development and assessment of safe systems and services by ensuring that proper consideration is given to core safety issues as part of the systems engineering process.

**System Safety Engineering (PGCert) - Postgraduate taught ...**

In a classic system safety engineering program, the system hazard analyses necessary to identify risks are continually performed and those risks are communicated to all segments of the project team and institutional management.

**System Safety Engineering - an overview | ScienceDirect Topics**

System safety is a speciality within system engineering that supports program risk man agement. It is the application of engineering and management principles, criteria and techniques to optimize safety.

**Chapter 3: Principles of System Safety**

System safety engineering focuses on identifying hazards, their causal factors, and predicting the resultant severity and probability. The ultimate goal of the process is to reduce or eliminate the severity and probability of the identified hazards, and to minimize risk and severity where the hazards cannot be eliminated.

**Safety Engineering - SEBoK**

System Safety, a sub-discipline of Systems Engineering has a history only a few decades long. System Safety is one method of communication between the Engineering process working on a system and the Decision-Making process which must decide if the Risks involved in the system are acceptable.

Reliability Engineering and System Safety is an international journal devoted to the development and application of methods for the enhancement of the safety and reliability of complex technological systems, like nuclear power plants, chemical plants, hazardous waste facilities, space systems, offshore and maritime systems, transportation systems, constructed infrastructure and manufacturing plants. The journal normally publishes only articles that involve the analysis of substantive ...

**Reliability Engineering & System Safety - Journal - Elsevier**

Safety engineering is an engineering discipline which assures that engineered systems provide acceptable levels of safety. It is strongly related to industrial engineering/systems engineering, and the subset system safety engineering. Safety engineering assures that a life-critical system behaves as needed, even when components fail.

The MSc/Postgraduate Diploma in Safety, Risk and Reliability Engineering, led by Professor Guy Walker, is only available by attendance-free distance learning. The programme comprises eight taught courses. Heriot-Watt Online students must first take exams in two courses of the programme, Human Factors Methods and Learning from Disasters. Based on the results from these courses students continue on the programme at MSc or at PG Diploma level.
