The Albumen And Salted Paper

The Albumen and Salted Paper Book is a book about the major photographic printing processes in use during the years 1840 - 1895, approximately the first half-century of photographic history. These first 50 years of photography established a tradition of individual experimentation and craftsmanship in which each photographer (of necessity) participated in the manufacture of the printing materials he or she used.

Chapter 3. The Albumen & Salted Paper Book

While salted paper prints are comprised of a single layer of paper support that contains the image particles, albumen prints have two layers. When albumen (egg white) was applied to the paper support, a binder layer was also created. In an albumen print, the image sits in the binder rather than in the paper fibers as in a salted paper print.

Early attempts included crystalotypes, introduced by John Adams Whipple, in which salted paper prints were created from albumen on glass negatives. While the process resulted in images with finer detail, it proved to be a complicated one. By the early 1850s, the majority of salted paper prints were produced from collodion on glass negatives.
