Ecology is the study of the complex ways that living things interact with their environment. In regions that receive a lot of snow, plants and animals have to cope with unique challenges.

Snow Ecology | National Snow and Ice Data Center

The ecology of snow includes the forces on the objects that it covers. For example, snow in southern Finland at the end of March, estimated to weigh 100–120 kg per m², compresses the shoots of bog moss. The weight of snow can deform and break trees, branches and the soft tissues of plants such as grasses and forbs.

Knowledge of snow leopard behavior and ecology is primarily anecdotal (Guggisberg, 1975; Schaller, 1977). More information has been published in recent years, but it mostly concerns captive snow leopards. This is the first successful attempt at in-depth study of this elusive carnivore. His Majesty's Government (HMG) took far-sighted action in ap-

Environmental factor was recognized by science early in the 20th century, it wasn't until the 1950s that the way snow shaped alpine plant communities was analyzed. In the new millennium, experiments explored effects of snow depth and snow-cover duration on plant communities and ecosystem processes.
