UIT Cambridge Ltd. - The Exim SMTP
mail server

Exim is a message transfer agent (MTA) developed at the University of Cambridge for use on Unix systems connected to the Internet. It is freely available under the terms of the GNU General Public Licence. In style it is similar to Smail 3, but its facilities are more general. There is a great deal of flexibility in the way mail can be routed, and there are extensive facilities for checking incoming mail.

Exim Internet Mailer

E-mail is the most widely used application on the Internet. Exim is rapidly becoming one of the most widely used mail servers, handling mail for tens of millions of users daily.

33. SMTP authentication - Exim

Included are instructions to deploy Exim as the SMTP email server throughout an organization, configure a reliable mail service to meet the specific needs of the site, tune the server to give optimal performance in the environment, as well as secure an e-mail system to prevent unauthorized use and maintain the confidentiality of messages.

The Exim SMTP Mail Server: Official Guide for Release 4 ...

Overview By default, Exim sends mail from the server's primary IPv4 address. To decrease the chance that spam filters mark your mail as spam, verify that the reverse DNS (rDNS) entry of Exim's outgoing IP address matches the DNS response of your server's hostname.

Access Free The Exim Smtplib Mail Server Official Guide To Release 4 Official How to Configure the Exim Outgoing IP Address | cPanel ...

Exim is a popular mail transfer agent (MTA) originally designed for use at the University of Cambridge to replace the existing mail systems in place. Although based on an older MTA design, Exim has since grown and splintered off into a unique concept; Exim aims at being flexible and working with a variety of Unix-like systems.

How to Install Exim Mail Server on Ubuntu 17 - Globo.Tech

Exim4 is a Message Transfer Agent (MTA) developed at the University of Cambridge for use on Unix systems connected to the Internet. Exim can be installed in place of sendmail, although its configuration is quite different.

Ubuntu

SMTP is the Simple Mail Transfer Protocol, the "language" MTAs use to communicate with each other. They accept incoming email, queue it, and then send it to another MTA or a mail delivery agent. Our goal is to relay email through a Smarthost, which is just a sophisticated MTA. To do so, we have to configure Exim, cPanel's built-in MTA, to tell it how to authenticate and relay messages. Exim is quite secure for most cases
but loses to Postfix. A proper
configuration of your Postfix MTA
provides improved defenses against
spam, abuse, and leakage of sensitive
data. Though it's hard to compete
against Gmail's security, you are
much less likely to be compromised in
a data breach with Postfix.

UIT Cambridge Ltd.

cPanel has an integrated mail transfer agent called Exim, and, like all MTAs, it uses SMTP to communicate with mail clients and other MTAs. That's why MTAs are sometimes called SMTP servers. For the most part, cPanel users don't have to configure Exim or worry about SMTP's intricacies because cPanel takes care of the nitty-gritty details.
