The Far Side and Astronomy . Because the far side is shielded from radio frequency interference from Earth, it's a perfect place to put radio telescopes and astronomers have long discussed the option of placing observatories there. Other countries (including China) are talking about locating permanent colonies and bases there. In addition, space tourists could find themselves exploring all over the Moon, both near and far side.

The far side of the Moon in front of Earth. ©NASA/LRO. The Moon does not radiate its own light, but its surface reflects the Sun's rays. Half of the Moon's surface is always illuminated, and during the course of a lunar month, most areas of the surface have about 14-15 days of sunlight. On the far side, the Moon phases are exactly opposite from the ones we see from Earth, on the near side.
