Uses, Problems in Construction of Index Number An index number in statistics is a tool that we generally use to measure the difference in relative changes from time to time. The difference can also be from place to place. It can be thought of as the arithmetic mean that we use to find or represent some values of a particular data

Theorems - Oxford... Theorems

An index number is not applicable to an individual belonging to a group for which it is constructed. If an index number shows a rise in the price level, an individual may not be affected by it. This is because an index number reflects averages.

year should be a normal year and economically stable year.

Construction of index number: Steps involved and care to ...

Theoretically speaking, geometric mean is the best average in the construction of index numbers because of following reasons: (i) in

Where To Download The Index Number Problem

the constructions of index number we are concerned with ratios of relative changes and the geometric mean gives equal weights to equal ratio of change; (ii) geometric mean is less susceptible to major variations as a result of violent fluctuations in the values of the individual items; and (iii) index numbers calculated by using the average are reversible
