The Instant Pot Electric Pressure

In pressure cooking mode, the Instant Pot locks the lid on and heats the liquid within it to make steam and it's this steam that increases the pressure within it. This in turn speeds up the cooking time considerably, because under pressure water boils at a higher temperature, and the pressure forces the liquid into the ingredients faster.

[Instant Pot Duo review 2020 - BBC Good Food](#)

Electric pressure cookers normally operate at a pressure range of 70-80 kPa (kilopascal) or 10.15~11.6 psi (pound-force per square inch). This translates to the temperature of 115°C~118°C or 239°F~244°F. Initially pressure may reach 105kPa/15.2 psi, due to the heat dissipation delay from the heating element.

[Electric Pressure Cookers - Instant Pot UK](#)

The 1 st generation electric pressure cookers already have the essential pressure and temperature sensors. Both sensors act as a threshold moderator. When either the threshold of pressure or temperature is reached, the power to the heating element is cut. The only user-accessible control is via the mechanical cooking time controller.
