can be used for solving mathematical problems of finding initial heat and hydrodynamic conditions for the calculation of heat-stressed processes in metallurgy and mechanical engineering, for example, for the calculation of the parameters of ...

Mathematical Modeling of Cooling High-Temperature ...

For a cooling process, the half-cooling times (HCT, hour) and seven-eighths cooling times (SECT, hour) are the times required to reduce by half ($Y_{avg} = 1/2$) and by seven eighths ($Y_{avg} = 1/8$), respectively, the temperature difference between the produce and the cooling air. In the cooling process, as the fruit

A system approach to mathematical modeling of cooling ...

Newton's law of cooling can be modeled with the general equation $dT/dt = -k(T - T_a)$, whose solutions are $T = Ce^{-kt} + T_a$ (for cooling) and $T = T_a - Ce^{-kt}$ (for heating). If you're seeing this message, it means we're having trouble loading external resources on our website.

This paper discusses an attempt to examine pre-service teachers' mathematical modelling skills. A modelling project investigating relationships between temperature and time in the process of cooling of coffee was chosen. The analysis was based on group written reports of the cooling of coffee project and observation of classroom discussion.
