Results supported the moderating effects of organization-based self-esteem. It was found that employees with high levels of organizationbased self-esteem were less responsive to the perception of organizational uncertainty. Moreover, it was found that the moderating effects of organization-based self-esteem differed across outcome variables.

Table 5 reports the results of hierarchical regression analyses used to test the hypotheses for the moderating effects of organizational level between role stress and its two components (role conflict and role ambiguity) on job satisfaction. The overall results of this analysis shows that role conflict, role stress and organizational level have a significantly detrimental effect on job satisfaction after controlling for age, tenure and employment status, but role ambiguity was not a ...

The findings here provide partial support for our prediction in Hypothesis 1 that the moderating effect of organizational tenure in the commitment-OCB relation is positive in nature, with the relation being stronger for individuals with higher organizational tenure. Before roughly 10 years of organizational tenure, increasing years of tenure strengthened the positive relation between affective organizational commitment and OCB.
