The coronavirus pandemic and climate change are both intrinsic to capitalism. Both are global problems, and both are simultaneously ecological and economic. But each crisis is playing out very differently on the ground. They are interacting, and with other factors, but in unforeseen and still poorly understood ways.

For this reviewer, the most unsatisfying and limiting aspect of the book is its theoretical underpinning of political ecology and the notion of the co-production of environmental reality with which the author begins and which he elaborates in the context of climate. It is to the merit of political ecology that it emerged early on as a response ...

Political ecology applies a system's perspective to understanding the ecological ramifications and sequelae of political economic inspired practices and policy on both macro- and microenvironments. It looks upstream at the actors and actions responsible for setting environmental changes in motion, and downstream at those subject to such changes.
