• Routine treatment of CAP with macrolide monotherapy is no longer recommended unless local resistance is low. Amoxicillin and doxycycline are preferred in low-risk patients. • Five-day treatment...

Community-Acquired Pneumonia: Updated Recommendations from ...

Community-acquired pneumonia (CAP), by definition, is pneumonia acquired outside a hospital. A joint guideline (2019) from the American Thoracic Society/ IDSA addresses diagnosis, management and follow-up. The focus of this document is on non-immunocompromised individuals (e.g., those without inherited or acquired immune deficiency or drug-induced neutropenia, those actively receiving cancer chemotherapy, HIV with suppressed CD4 counts or transplant recipients).

Guideline for the Treatment of Community-Acquired ...

The guideline makes recommendations in response to key decisions facing clinicians caring for patients with CAP, including diagnostic testing, site of care, selection of initial empiric antibiotic therapy and subsequent disease management. The guideline focuses on adults who are not immunocompromised.

ATS/IDSA Publishes Clinical Guideline on Community ...

In patients with recent hospitalization and exposure to parenteral antibiotics, we recommend microbiological testing without empiric extended-spectrum therapy for treatment of nonsevere CAP and microbiological testing with extended-spectrum empiric therapy in addition to coverage for standard CAP pathogens for treatment of severe CAP, with deescalation at 48 hours if cultures are negative and the patient is improving.

Community-Acquired Pneumonia in Adults: Diagnosis and ...

In a study conducted in a Sydney, Australia, teaching hospital, most patients hospitalized with CAP were initially prescribed 2 antibiotics, and then after completing IV therapy, 62% of these patients were prescribed 2 oral agents, 27% were prescribed 1 oral agent, and 11% were not prescribed any sequential therapy.

Management of Community-Acquired Pneumonia in Adults

For hospitalized adults with nonsevere CAP who do not have risk factors for P. aeruginosa or MRSA, the guideline recommends empiric treatment with a beta-lactam plus a macrolide or with a respiratory fluoroquinolone. For patients who have documented allergies or contraindications to both macrolides and fluoroquinolones, a third option is combination therapy with a beta-lactam and doxycycline.

A new era of pneumonia management | ACP Hospitalist

For such patients, recommended empiricaltherapeutic options include (1) a respiratory fluoroquinolone (moxiflox- acin, gemifloxacin, or levofloxacin [750 mg daily]) or (2) com- bination therapy with a b-lactam effective againstS. pneumon- iaeplus a macrolide (doxycycline as an alternative).
