The Turing test, originally called the imitation game by Alan Turing in 1950, is a test of a machine's ability to exhibit intelligent behaviour equivalent to, or indistinguishable from, that of a human. Turing proposed that a human evaluator would judge natural language conversations between a human and a machine designed to generate human-like responses.

The Turing Test on Steam

A test devised by the English mathematician Alan M. Turing to determine whether or not a computer can be said to think like a human brain. In an attempt to cut through the philosophical debate about how to define "thinking," Turing devised a subjective test to answer the question, "Can machines think?" and reasoned that if a computer acts, reacts and interacts like a sentient being, then call it sentient.

A reversed form of the Turing test is widely used on the Internet; the CAPTCHA test is intended to determine whether the user is a human or a computer. In 1948 Turing, working with his former undergraduate colleague, D.G. Champenowne , began writing a chess program for a computer that did not yet exist.

Alan Turing - Wikipedia

In 1950, Turing wrote a paper titled 'Computing Machinery and Intelligence' which dealt with the topic of whether machines are technically able to show intelligent behavior. In the paper, he first proposed the Turing Test, a test based on 'the imitation game', where a man, a woman, and a computer go into separate rooms.

Eugene Goostman: The First AI to Pass the Turing Test?

But the most famous element of his paper lies in his Test. Turing put forward the idea of an 'imitation game', in which a human being and a computer would be interrogated under conditions where the interrogator would not know which was which, the communication being entirely by textual messages.
