The UL Mark appearing on the coil, reel, flange, or box is the only means to identify wire/cable covered under UL certification and Follow-Up Service. The UL symbol or letters "UL" surface printed on the wire/cable is only a supplemental method of marking the product and should not be considered as evidence of UL coverage.

Wire and Cable - UL

Only the appropriate UL Mark — on the wire or cable or on its packaging — is a valid indication of UL certification. UL assigns a unique E-number (E and a 3- to 6-digit number for wire and cable products) to each applicant in every product category.

UL Cable Marking Explained - Nicab

The UL Mark appearing on the coil, reel, flange, or box is the only means to identify wire/cable covered under UL certification and Follow-Up Service. The UL symbol or letters "UL" surface printed on the wire/cable is only a supplemental method of marking the product and should not be considered as evidence of UL coverage.

Wire and Cable - UL Code Authorities

Wire and cable types are divided into three tables in the Wire & Cable Marking Guide: Table 1 — Building wires and cables, including some industrial cables Table 2 — Low voltage cables, flexible cords, and fixture wires Table 3 — Special purpose wire and cable Each type of wire or cable is identified by type designation, followed by associated NEC Article (if applicable), and followed by the respective UL product category (not marked on the wire).

Wire and Cable Marking Considerations - UL

UL is your global partner for wire and cable testing for safety, compliance, performance, quality, and reliability. UL supports your drive to enhance product quality and safety, access global markets and clearly differentiate your products in the marketplace. Our customer-centric service offerings include the rigorous assessments that manufacturers, installers, brand owners, retailers, regulatory bodies and consumers have come to expect from UL.

Wire and Cable Testing and Certification Services | UL

The largest UL category for wire and cable – Appliance Wiring Material (AWM) is commonly used in a variety of applications such as general-purpose wiring circuits and internal wiring of appliances. AWM is always considered a “Recognized” component evaluated for specific uses, outlined by the style number printed on the jacket.

Understanding UL Listed vs. UL Recognized for Wire and Cable

UL issues the first UL Verified Mark in the field of Wire & Cable in Japan for Furukawa Techno Material's PROTECO series for building wires March 13, 2019 UL has verified Furukawa's flame propagation prevention performance and low smoking property performance claims of PROTECO®SHEET and PROTECO®TAPE when wound onto building wires

UL Issues First Wire and Cable Verified Mark in Japan | UL

PUR (Polyurethane) can be and is used as a cable jacketing compound on UL listed cables that pass the UL Large Scale Cable Flame Test (bundled fire test). for applications such as industrial equipment and machinery, UL1277 (Power and control tray cable), UL13 (Power limited circuit cables (PLTC, CL2, CL3)) and UL2277 (Flexible motor supply caable) are typically much more relevant standards than UL 444 (CM).

UL Listed or UL Recognized - which cable is the right one?

Marking and application guides are designed to assist code authorities, designers, and installers in determining the suitability of UL certified equipment for use in a particular installation. The guides describe the standards used to investigate the products, the intended installation codes, product markings and other information that can be used to verify the product is used in accordance with its certification.

Marking and Application Guides - UL Code Authorities

Underwriters Laboratory (UL) is a third-party testing laboratory that certifies and tests products. UL assigns a different style number for each approved AWM construction and creates a style page that lists a few specifications, such as gauge size range, insulation material, temperature rating and voltage rating.
