Veritas Cluster Server Installation Guide

In a cluster, two or more servers (called nodes) are linked in a network. These servers run the cluster software that allows each node access to the shared disks. If a node becomes unavailable, cluster resources migrate to an available node (this process is called failover). The shared disks and the virtual server are kept available.

sort.veritas.com

Veritas Cluster Server The Group Membership and Atomic Broadcast (GAB) and Low Latency Transport (LLT) are VCS-specific protocols implemented directly on an Ethernet data link. They run on redundant data links that connect the nodes in a cluster. VCS requires redundant cluster communication links to avoid single points of failure.

Veritas Cluster Server

This plug-in allows Geneos users to monitor the Veritas Cluster Server system, specifically information relating to service group and system status, resources used by service groups and the attributes of those resources, and heartbeat links status. Information is extracted by running a number of Veritas executables and parsing their output.
