Vinegar Fermentation Uc Food Safety

zHeat vinegar before pouring it into sterilized bottles zBottle and place in hot water bath zIn both cases the temperature of the vinegar must reach at least 140F and should not exceed 160F and should be held at that temperature for at least 30 minutes zStored vinegar will stay in excellent condition almost indefinitely if it is pasteurized

VINEGAR MAKING - UC Food Safety

Food Safety Because vinegar is high in acid, it does not support the growth of Clostridium botulinum bacteria. Partially funded

by a CDFA Specialty Crop Block Grant

Vinegar - UC Agriculture & Natural Resources

Fermentation happens when the natural bacteria in the vegetables breaks down the components into forms easier to digest and sometimes more nutritious than raw vegetables. Some consider fermented vegetables safer than raw products because of the lactic acid produced killing any pathogens.
