1.0 for DOS. First released in 1991, Microsoft Visual Basic was a programming environment where one could build an application by visually creating the user interface first, and then adding code. In contrast, even the smallest Visual Basic basic programs could take reams of program code to write in C or C++. Visual Basic was extremely popular for business application programming.

Visual Basic 1.0 for MS-DOS (1992) Traditionally in the early 1990s software products would typically have their origins beginning with DOS, and later eventuate to becoming a Windows 3.x based product. VB 1.0 for MS-DOS didn't fit the mould and was released the following year from the initial Windows version.

Visual Basic: Early Beginnings – Socket 3

I know this is an old question, and perhaps by this time the MS-DOS box the OP talks about is now in a museum, but if your language of choice is Visual Basic, then I suggest you try either PowerBasic (still available, commercial, can compile into 16 bit code) or QBasic (which is already available on your DOS box anyway.

Open Visual Studio 2019. On the start window, choose Create a new project.. On the Create a new project window, enter or type console in the search box. Next, choose Visual Basic from the Language list, and then choose Windows from the Platform list.. After you apply the language and platform filters, choose the Console App (.NET Core) template, and then choose Next.

Tutorial: Get started with Visual Basic - Visual Studio ...

Visual Basic evaluates these values only at this time and then assigns start to counter. Before the statement block runs, Visual Basic compares counter to end. If counter is already larger than the end value (or smaller if step is negative), the For loop ends and control passes to the statement that follows the Next statement.

For...Next Statement - Visual Basic | Microsoft Docs

RetVal = Shell("myprogram.bat > output.txt", 3) 'Run DOS program. Create file "output.txt" when it completes. newHour = Hour(Now()) newMinute = Minute(Now()) newSecond = Second(Now()) + 3 waitTime = TimeSerial(newHour, newMinute, newSecond) Application.Wait waitTime 'Wait three seconds before checking. If Dir("output.txt") = "" Then GoTo TryAgain

DOS From Macros (Microsoft Excel)

Part Description; pathname: Required; Variant (String).Name of the program to execute and any required arguments or command-line switches; may

include directory or folder and drive. On the Macintosh, you can use the MacID function to specify an application's signature instead of its name. The following example uses the signature for Microsoft Word: Shell MacID("MSWD")
