Water-Based Paint Formulations
Volume 3 by Ernest W. Flick The best
way to determine the critical PVC of a
paint is to measure the volume of the
dry pigment/extender mix of a paint
in a centrifuge and to calculate the
CPVC as follows: $CPVC = (\text{calculated}$
 $\text{volume pigment/extender mix} /$
 $\text{volume after centrifuge}) \times 100 \dots$

Calculations on Paint Formulas ~ Archie Paint

For water based paints within a PVC range of 20 to 45% it may be necessary to follow a slightly modified reformulation protocol. Both the protocol and the rationale for it are outlined below: Testing Protocol 1) Replace 10% of the TiO with the same weight of FP 460

Formulation Guidance for the use of FP-460 in Coatings

majority of the decorative coatings are water-based systems. and the constant volume growth of this group is foreseen. Water-based architectural coatings can generally be divided. into two groups: interior and exterior paints. 1.2Benefits. • Safe handling and storage – low flammability and toxicity.
