If  $x$  is the observed value, then very often, "as extreme or more extreme than what was actually observed" means  $\{x, x + \dots\}$

A p-value is the probability that, if the null hypothesis were true, we would observe a statistic at least as extreme as the one observed. To calculate a p-value we use the appropriate software or statistical table that corresponds with our test statistic.

The p-value is conditional upon the null hypothesis being true is unrelated to the truth or falsity of the research hypothesis. A p-value higher than 0.05 ( $> 0.05$ ) is not statistically significant and indicates strong evidence for the null hypothesis. This means we retain the null hypothesis
