Certainly not an exhaustive textbook, it does however generate momentum for further study and will definitely lay a solid foundation of structural understanding.

Amazon.com: Customer reviews: Why Buildings Stand Up: The ...

If a skyscraper is 200 m (650 ft) tall and a gale blows it hard at the top, there's a huge turning force trying to tip the whole building over to the side. That's why tall buildings need deep foundations (where a significant part of the building is constructed underground to support the part that's above ground). If something tries to push the top the building to one side, the foundations effectively resist and push it back in the opposite direction!

lot: 2 books WHY BUILDINGS...FALL DOWN and WHY BUILDINGS ...

The companion to this book (Why Buildings Stand Up) was a textbook for one of my classes when I was in architecture school in the 80s. I still have my old, dog-eared copy on my bookshelf in my office. I purchased this book, along with a new edition of Why Buildings Stand Up, to give to an 11-year-old (super intelligent) friend who would like to ...
