Winterizing a 3.0l 4cyl mercruiser inboard engine. In Canada, it is very important to properly winterize marine equipment. Particularly inboard engines. If an engine is left full of water, and it freezes it will crack the block. an engine with a cracked block will need to be rebuilt, or replaced, and can cost upwards of \$10,000.00.

*How To Winterize An Inboard Engine - YouTube*

Many popular Mercruiser sterndrive and inboard engines use a closed cooling system that adds many years to the engine's life but requires a bit more care than open systems. Winterizing time is the perfect opportunity to take care of the closed cooling system, helping you ensure a trouble-free boating season next year. Step 1

Add five gallons of gas, two quarts of TC-W3 two-stroke oil and five ounces of fuel stabilizer.

### *Winterizing Freshwater-Cooled Engines | Boating Magazine*

You must winterize your MerCruiser 4.3L V6 before storing it. The engine sucks water up from the lake through the impeller to cool the engine. This water does not automatically drain out of the engine. Because water expands when it freezes, it's imperative to drain the water from the engine. The carburetor also needs special attention.

## Online Library Winterizing Mercury Inboard Engine

Before putting your boat away for the winter, you must first winterize the motor. Your Mercruiser 3.0 uses the water in the lake to cool the engine while boating. This water stays inside the engine. Failure to remove the water will cause freezing. As the water freezes, it expands. This will cause the engine block to crack.
