wireless networks.

## **Security Threats - Wireless Networks first-step [Book]**

First Step Internet has established a comprehensive wireless network with numerous access points throughout Eastern Washington and North Central Idaho. These access points broadcast and receive microwave signals that deliver high-speed Internet service to antennas mounted on homes or buildings, without the need for phone or cable lines.

The first step in attacking a wireless network involves finding a network to attack. The most popular software developed to identify wireless networks is the Windows-based NetStumbler ([www.netstumbler.com](http://www.netstumbler.com)). This type of scan, driving around looking for wireless networks, is known as war driving.
