In the 1997-2009 period vegetable oil consumption increased strongly (to 4% per year) due to the lift-off of the biodiesel market.

World food consumption patterns trends and drivers

The lowest quantities consumed are recorded in Africa, while the highest consumption occurs in parts of North America and Europe. The important point is that there has been a remarkable increase in the intake of dietary fats over the past three decades (see Table 3) and that this increase has taken place practically everywhere except in Africa, where consumption levels have stagnated.

WHO | 3. Global and regional food consumption patterns and ...

As a result, the growth in world demand for agricultural products is expected to fall from an average 2.2% per year over the past 30 years to an average 1.5% per year for the next 30 years. In developing countries the slowdown will be more dramatic, from 3.7% per year to 2% per year, partly as a result of China having passed the phase of rapid growth in its demand for food.

1: Global trends in consumption - THE GEOGRAPHER ONLINE

It is arguable that the world can ' t sustain 7 billion people let alone 9 billion. But population numbers aren ' t the only problem. Changes in patterns of consumption may have an even greater effect than population increase. As populous countries such as China and India become more industrialised they will consume more energy and other resources.
